

Link Without Underline

Learn how to create links without the underline in Dreamweaver using stylesheets.

Have you wanted to get rid of the underline in a link? Well! It's really simple using CSS styles. Learn how to make links with no underline.

If you use Dreamweaver as your HTML editor you need to go to your style palette, make a new style and apply the style on your link. Here are the steps:

1. Click on **Windows>Styles**.
2. Click on the '**Style Sheet**' button.
3. Click on **New**.
4. Give your style an appropriate name like 'nounderline' and click on **OK**.
5. Here's the trick - check the box next to **None**. This means that this style has no decoration.
6. Now you need to apply this style to all the links in your page.

The code will look like this:

```
<style type="text/css">
<!--
.nounderline { text-decoration: none}
-->
</style>
```

Important: You need to copy the style within the <HEAD> tags.

If you want the no underline style for all the links in your site you can use the a:link style. When you are creating a new style you need to choose 'Use CSS Selector'. Click on OK and make your style (e.g Arial, size 10, color #000066, no underline). Click on the check box next to **None** to make sure your links are without an underline.

The code will look like this:

```
<!--
a:link { font-family: Arial, Helvetica, sans-serif; font-size: 10pt; color: #000066; text-
decoration: none}
-->
```

Once you have made the style you don't need to apply it on all the links, it will automatically be the default style for all the links.

Note: If you are using an a:link style its best to use the a:visited also, or the link will look different when it has already been visited. You can also try the a:hover style to get some cool text rollovers.

E.g of a:link, a:hover and a:visted

```
<style type="text/css">
<!--
a:hover { font-family: Arial, Helvetica, sans-serif; font-size: 10pt; color: #990000; text-
decoration: underline}
a:link { font-family: Arial, Helvetica, sans-serif; font-size: 10pt; color: #000066; text-
decoration: none}
a:visited { font-family: Arial, Helvetica, sans-serif; font-size: 10pt; color: #31654A; text-
decoration: none}
-->
</style>
```

Copy and Paste the above code in your web page and check out your links. Make sure it copied within your <HEAD> tags.

If you are already familiar with CSS styles, all you need to do is add '**text-decoration: none**' to your style.
