

# HTML Attributes

## HTML / XHTML Standard Attributes

The attributes listed below are standard, and are supported by all HTML and XHTML tags, with a few exceptions.

### Core Attributes

Not valid in base, head, html, meta, param, script, style, and title elements.

Attribute	Value	Description
class	classname	Specifies a classname for an element
id	id	Specifies a unique id for an element
style	style_definition	Specifies an inline style for an element
title	tooltip_text	Specifies extra information about an element (displayed as a tooltip)

### Language Attributes

Not valid in base, br, frame, frameset, hr, iframe, param, and script elements.

Attribute	Value	Description
dir	ltr rtl	Specifies the text direction for the content in an element
lang	<i>language_code</i>	Specifies a language code for the content in an element.
xml:lang	<i>language_code</i>	Specifies a language code for the content in an element, in XHTML documents.

### Keyboard Attributes

Attribute	Value	Description
accesskey	<i>character</i>	Specifies a keyboard shortcut to access an element
tabindex	<i>language_code</i>	Specifies the tab order of an element
